renex community bulletin

august 2013

## Renex Integrated Waste Treatment & Resources Recovery Facility

This is our third Community Bulletin for residents and interested stakeholders in the Dandenong area.

RENEX is developing Australia's first permanently located contaminated soil treatment facility, using the most advanced thermal treatment technology available. This new facility will treat soil from various construction projects around Victoria allowing for safe re-use in many applications and significantly reducing the amount of contaminated soil being disposed to Victorian landfills.

**RENEX**<sup>®</sup>  
Proven Alternatives.

Since our first Community Information Forum in September, 2012 we have been busy on-site with the construction of the new facility. The development of the facility is expected to reach its first significant milestone in October 2013, when we will be able to receive and store contaminated soil. In keeping with RENEX's commitment to keep the community informed, we would like to invite you to our second Community Information Forum on 9th September 2013.

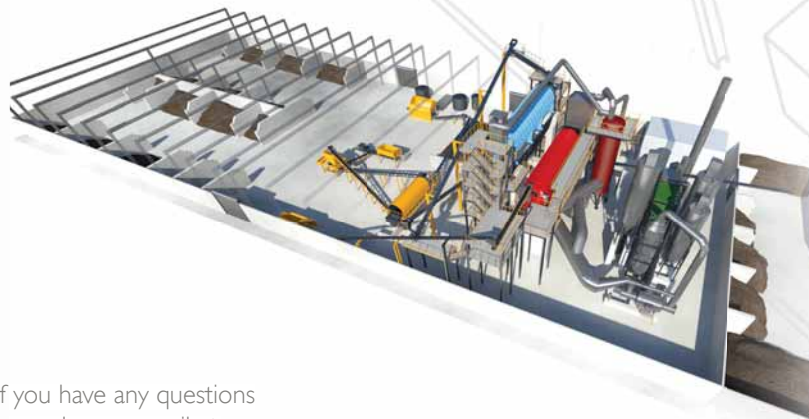

**You are invited to join members of the Renex team for an update on the project**

**On Monday 9th September 2013**

at the Drum Theatre

226 Lonsdale Street Dandenong

from 7:00 - 8:30pm

**For more information**

Please contact us on 03 9988 7786 if you have any questions or if you would like more information send us an email at: [community@renexgroup.com](mailto:community@renexgroup.com)
